

Estimating Quilting Costs

To estimate the cost to quilt your top, measure the length and width in inches, and multiply these to calculate the number of square inches. Then multiply the number of square inches by the cost per square inch, depending upon the type of quilting required.

Your top will be measured in at least three places for both length and width, and an average calculated that will be used to determine the actual quilted area.

Edge to Edge quilting designs run the full width of the quilt. Patterns are categorized according to the density of the quilting and the complexity of the pattern

Edge to Edge quilting starts at 1.5¢ per square inch, depending upon complexity and density of pattern.

Custom Quilting can use either Edge to Edge designs or individual motifs. It can also include free motion quilting as needed. Sampler quilts generally require custom quilting.

Custom Quilting starts at 3¢ per square inch, and goes up depending upon complexity.

Heirloom Quilting is more specialized than Custom Quilting. As a general rule, anything with very heavy quilting will be considered heirloom. Heirloom Quilting may also include stippling or echoing around appliquéd items, stitch-in-the-ditch or ¼" outlining.

Heirloom Quilting starts at 5¢ per square inch.

After consulting with you on how to quilt your top, a quote will be provided (either written or via e-mail).
